SUBCELLULAR LOCATION: Type II membrane protein. Membrane-bound form in trans cisternae of Golgi (By similarity).
SIMILARITY: Belongs to the glycosyltransferase family 10.
CAUTION: Ref.4 sequence differs from that shown due to a frameshift in position 112.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       COFACTOR: Manganese

Biol. Chem. 272:8764-8773(1997).

-i- FUNCTION: May catalyze alpha-1,3 and alpha-1,4 glycosidic linkage involved in the expression of siallyl Lewis X and Lewis X/SSEA-1 antigens. It may be involved in blood group Lewis determination.

-i- CATALYTIC ACTIVITY: GDP-beta-L-fucose + beta-D-galactosyl-(1-3)-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    01-OCT-1996 (Rel. 34, Created)

                                                                                                                                                                                                                                                                                N-acetyl-D-glucosaminyl-R = GDP + beta-D-galactosyl-(1->3)-[alpha-L-fucosyl-(1->4)]-N-acetyl-beta-D-glucosaminyl-R.

PATHWAY: Glycosylation.
SUBCELLULAR LOCATION: Type II membrane protein. Membrane-bound form in trans cisternae of Golgi.
TISSUE SPECIFICITY: LIVER, KIDNEY, LUNG AND BRAIN.
MISCELLANGOUS: Also acts on the corresponding 1,4-galactosyl derivative, forming 1,3-L-fucosyl links.
SIMILARITY: Belongs to the glycosyltransferase family 10.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 taurus

J. Biol. Chem. 27:29721-29728(1997).
-i- FUNCTION: ENZYME INVOLVED IN THE BIOSYNTHESIS OF THE E-SELECTIN
LIGAND, SIALYL-LEWIS X. CATALYZES THE TRANSFER OF FUCOSE FROM GDP-
BETA-FUCOSE TO ALPHA-2, 3 SIALYLATED SUBSTRATES (BY SIMILARITY).
-i- CATALYTIC ACTIVITY: GDP-beta-L-fucose + beta-D-galactosyl-(1->3)-
N-acetyl-D-glucosaminyl-R = GDP + beta-D-galactosyl-(1->3)-[alpha-
L-fucosyl-(1->4)]-N-acetyl-beta-D-glucosaminyl-R.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       PATHWAY: Glycosylation.
SUBCELULIAR LOCATION: Type II membrane protein. Membrane-bound form in trans cisternae of Golgi (By similarity).
POLYMORPHISM: There are two alleles, A and B. Allele A has Pro 124, Gln-172 and Val-192. Allele B has Leu-124, Glu-172 and Alley.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SIMILARITY: Belongs to the glycosyltransferase family 10
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        213
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    PANTR

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            antigens.

CATALYTIC ACTIVITY: GDP-beta-L-fucose + beta-D-galactosyl-(1->3)-
N-acetyl-D-glucosaminyl-R = GDP + beta-D-galactosyl-(1->3)-[alpha-
L-fucosyl-(1->4)]-N-acetyl-beta-D-glucosaminyl-R.

L-fucosyl-(1->4)]-N-acetyl-beta-D-glucosaminyl-R.

PATHWAY: Glycosylation.

SUBCELLULAR LOCATION: Type II membrane protein. Membrane-bound form in trans cisternae of Golgi.

TISSUB SPECIFICITY: LIVER, COLON AND TESTIS AND TRACE AMOUNTS IN T-CELLS AND BRAIN.

SIMILARITY: Belongs to the glycosyltransferase family 10.
                                                                                  333

RT "Evolution of fucosyltransferase genes in vertebrates.";
J. Biol. Chem. 272:29721-29728(1997).
CC -!- FUNCTION: May catalyze alpha-1, 3 glycosidic linkages involved in CC the expression of VIM-2, Lewis X/SSBA-1 and sialyl Lewis X
CC antigens (By similarity).
CC --- CATALYTIC ACTIVITY: GDP-beta-L-fucose + beta-D-galactosyl-(1->3)-CC N-acetyl-D-glucosaminyl-R = GDP + beta-D-galactosyl-(1->3)-CC L-fucosyl-(1->4)]-N-acetyl-beta-D-glucosaminyl-R.
CC --- SUBCELLULAR IOCASTION: Type II membrane protein. Membrane-bound CC --- SUBCELLULAR IOCASTION: Type II membrane protein. Membrane-bound CC ---- SUBCILARITY: Belongs to the glycosyltransferase family 10.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This SWISS-PROT entry is copyright. CC :- FUNCTION: MAY CATALYZE ALPHA-1,3 AND ALPHA-1,4 GLYCOSIDIC LINKAGES
CC :- FUNCTION: MAY CATALYZE ALPHA-1,3 AND ALPHA-1,4 GLYCOSIDIC LINKAGES
CC :- FUNCTION: MAY CATALYZE ALPHA-1,3 AND ALPHA-1,4 GLYCOSIDIC LINKAGES
CC :- FUNCTION: MAY CATALYZE ALPHA-1,3 AND ALPHA-1,4 GLYCOSIDIC LINKAGES
CC :- GROUP LEWIS EXPRESSION OF VIM-2, LEWIS B, SIALYL
CC HAVE AN ACTIVE ENZYME WHILE LEWIS-NEGATIVE (LE(+)) INDIVIDUALS
CC HAVE AN INACTIVE ENZYME.
CC :- CATALYTIC ACTIVITY: GDP-beta-L-fucose + beta-D-galactosyl-(1->3)-(alpha-
CC :- CATALYTIC ACTIVITY: GDP-beta-L-fucose + beta-D-galactosyl-(1->3)-(alpha-
CC :- CATALYTIC ACTIVITY: GDP-beta-D-glucosaminyl-R.
CC :- SUBCELLULAR LOCATION: Type II membrane protein. Membrane-bound
CC :- SUBCELLULAR LOCATION: Type II membrane protein. Membrane-bound
CC :- SUBCELLULAR LOCATION: Type II membrane protein. Membrane-bound
CC :- TISSUE SPECIFICITY: HIGHLY EXPRESSED IN STOMACH, COLON, SMALL
INTESTINE, LUNG AND KIDNEY AND TO A LESSER EXTENT IN SALIVARY
CC GLAND, BLADDER, UTERUS AND LIVER.
CC :- MISCELLANEOUS: Also acts on the corresponding 1,4-galactosyl
derivative, forming 1,3-L-fucosyl transferase family 10.

-- SIMILARITY: Belongs to the glycosyltransferase family 10.

RA COSTGALE M., Apoil P.-A., Calleau A., Elmgren A., Larson G.,
RA Henry S., Blancher A., Iordachescu D., Oriol R., Mollicone R.;
RT "Evolution of fucosyltransferase genes in vertebrates.";
RT "Evolution of fucosyltransferase in vertebrates.";
RT "Evolution of fucosylt linkages in vertebrates."
CC -!- FUNCTION: May catalyze alpha-1,3 and alpha-1,4 glycosidic linkages
CC (-!- Syntharic) application of sialyl Lewis X/SSEA-1
CC (-!- SUBCILULAR LOCATION: Type II membrane protein. Membrane-bound
CC -!- FOLYMORPHISM: There are two alleles, A and B. Allele A has Arg-
CC -!- POLYMORPHISM: There are two alleles, A and Met-304.
CC -!- SUBCELLULANEOUS: Also acts on the corresponding 1,4-galactosyl
CC -!- SINLIARITY: Belongs to the glycosyltransferase family 10.
CC -!- SINLIARITY: Belongs to the glycosyltransferase family 10.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This SWISS-PROT entry is copyright. Chem. 271:8250-8259(1996).

Biol. Chem. 271:8250-8259(1996).

FUNCTION: May catalyze alpha-1,3 glycosidic linkages involved in the expression of sialyl Lewis X antigens.

CATALYTIC ACTIVITY: GDP-L-fucose + alpha-2,3-Neu-N-acetyl-1,4-beta-D-galactosyl-N-acetyl-D-glucosaminyl-R = GDP + alpha-2,3-Neu-N-acetyl-1,4-beta-D-galactosyl-(alpha-1,3-L-fucosyl)-N-acetyl-D-glucosaminyl-R.

acetyl-D-glucosaminyl-R.

acetyl-D-glucosaminyl-R.

BATHWAY: Glycosylation.

SUBCELULAR LOCATION: Type II membrane protein. Membrane-bound form in trans cisternae of Golgi.

FUNCTION: May catalyze alpha-1,3 glycosidic linkages involved in the expression of sialyl Lewis X antigens. CATALYTIC ARCIVITY: GDP-1-fucose + alpha-2,3-Neu-N-acetyl-1,4-beta-D-galactosyl-N-acetyl-D-glucosaminyl-R = GDP + alpha-2,3-Neu-N-acetyl-1,4-beta-D-galactosyl-(alpha-1,3-L-fucosyl).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     N-acetyl-D-glucosaminyl-R.

PATHWAY: Glycosylation:
SUBCELLULAR LOCATION: Type II membrane protein. Membrane-
form in trans cisternae of Golgi.
TISSUE SPECIFICITY: LEUKOCYTIC/MYELOID LINEAGE CELLS.
SIMILARITY: Belongs to the glycosyltransferase family 10.
